RIGID DIBOND BASE

ENLARGED VIEW

UltraArt - The Ultimate in Fine Art

Redefining the entire concept of how Fine Art is presented. **UltraArt** is a special process consisting of top materials and craftsmanship; creating a Fine Art Masterpiece. The end result is that colors are more brilliant, details are enhanced, and the artwork is brought to life. **UltraArt** is one of the most astute and innovative processes used in the preservation and display of images.

First, we image a top quality long lasting digital C-print. This ensures vivid color reproduction, amazing details, brilliant whites, and long lasting stability made to withstand the test of time. We adhere the digital C-print to an aluminum composite material which is comprised of two high-grade aluminum sheets thermo-bonded to a solid polyethylene core. Why? The result makes it lighter than aluminum, yet engineered to retain superior flatness, outstanding rigidity, and long term durability.

Next, we carefully face mount the print to high-quality acrylic glass. The edges are routed and flame polished for a smooth professional finish. This unique "sandwich" yields a resilient high-end piece. **UltraArt** provides protection against UV light, environmental conditions, and chemical impurities in the air.

Finally, we apply a metal sub-frame backing. This rear bracing reinforces the art for long term display, provides mechanical means for hanging, and the art appears to "float" from the wall, creating depth.

UltraArt - The seamless integration of fine art, decor, and presentation - all in a finely crafted Masterpiece.
